

BT Voyager 240 4-Port Router Setup Guide (PC)

Your Starter Pack Contents:

1 x BT Voyager 240 Router 2 x Ethernet cables (grey) 1 x Power adapter (black) 1 x Telephone cable (black)
2 x Microfilters
1 x Document CD
1 x Foldout Quick Start Guide

Microfilter - Sometimes called splitters. You need to ensure that all the devices connected to your phone line are filtered in order for broadband to work correctly. If you are unsure how the filters that we have provided should be configured, read the support pages, available at <http://www.bteleworker.com/Support.php>

Computer Setup - Any computer you intend to connect to your Router must have an Ethernet port available. In addition, the computer network settings should be checked to ensure that it will "Obtain an IP Address automatically". View the foldout guide for more details.

- 1 Connect the router to a telephone line splitter using the telephone connection lead (black). Connect your router to the mains power supply using the included adapter and switch on the router. Connect your PC directly to the router using one of the supplied Ethernet (grey) cables.
- 2 Open your browser and type **http://192.168.1.1/** into the address field. You will be prompted for a username and password. Enter **admin** as both username and password. You will now be presented with the "Quick Start" screen. Note that if you cannot see the "**Quick Start**" configuration page you should click the Quick Start link on the menu on the left of the screen.

- 3 The Quick Start web management screen will be displayed if you logged in correctly.

The default settings assume that you are connecting to the standard type of broadband in the UK, so you do not need to change any technical settings.

If you ever need to change the broadband settings, you can choose **Advanced...** from the menu on the left.

- 4 On the Quick Start page type in the User Name and Password that were supplied when you signed up. Keep this information handy in case you need it later. When you are sure you have entered the details correctly - click **Finish**.

Your broadband username: <username>@<business_unit_id>.BTHA

Note that the correct **LAN side settings** will depend on your own network. If in doubt, please use the default settings. You will be provided with a prompt for the completion of setup, and a confirmation that your Internet connection has been made successfully. Congratulations, your broadband setup is now complete.
